THE MILITARY TRACTION TOOL

NSN: 2590-01-645-6666
MADE IN THE USA

THE MILITARY TRACTION TOOL

The short section is placed in line with the stuck tire with the traction side up. The bottom of the short section is smooth; allowing the tool to slide under the tire as the driver slowly accelerates.

The tire is now on a clean gripping surface. The long sections have arched gripping surfaces on top and bottom. The deep grooves give the needed traction to free the vehicle as the arched pattern of the grooves help center the tool in line with the tire.

The tool unfolds to almost five feet long which is usually enough to free the vehicle from most stuck situations.
